The City of Huber Heights contacted RA Consultants for assistance with setup, implementation, and updating their existing esri 10.0 ArcGIS server installation to version 10.2. Additionally, the City requested that updates be added to their current SDE database to show new areas that have not been previously mapped. Data updates requested included street centerlines, parcel boundaries, point addressing, fire hydrant locations, E911 data, etc. The City also requested that some of their existing data be corrected due to known issues relating to incorrect addressing or spelling errors. Once the ArcGIS server upgrades were completed, Huber Heights contracted RA to continue maintaining their GIS system and SDE databases. RA Consultants is currently working with the police department to modify their existing GPS/AVL system and incorporate into their existing GIS and SDE database.
